How Lean is your Business?

PSW Integrity is specialists at configuring and implementing systems that facilitate the flow and transparency of management information across all departments of an organization faster, with the emphasis on speed and accuracy, this results in more effective decision making to optimize business performance and results.

PSW has developed a unique approach to implementation using the principles of lean management thinking, which helps streamline the implementation process and engage all stakeholders throughout the project. This then leads to sustainable change and performance.

Every organization has a method for getting things 'done'. What every organisation doesn't have is a consistent process and system for achieving that output.

We work with our client to implement business management systems which may be frameworks such as ISO accreditations, which PSW assists tailor to your organization, or design a completely bespoke system, specific to your business's requirements.

We work with our client to implement business management systems which may be frameworks such as ISO accreditations, which PSW assists tailor to your organization, or design a completely bespoke system, specific to your business's requirements.

What is Lean Management?

Lean Management thinking is principally about creating excellence by removing the wasteful activity from processes so that they flow more efficiently and effectively to optimize business performance and increase organizational results.

Implementation of transformational change within an organization requires people to take ownership of the new processes, which is done by understanding and recognizing the benefits that will be generated and then lead others to effectively implement the process throughout an organisation.

At PSW Integrity, we help generate ownership and leadership through our 3 stage coaching program:

1 The Theory

We teach the methodology and theory of lean management thinking so people can fully understand the principles of why and how it will benefit their business.

2 Practical Implementation

Through research and experience, we have developed a comprehensive range of tools and frameworks that will teach people how to effectively implement their new processes.

3 1-2-1 Coaching

We work closely with key stakeholders of the project at every stage of implementation to ensure we can effectively pass on our knowledge and expertise so that they can lead others to effective process changes.

Everything we do is aimed at making a real difference through ensuring that your results are world-class and standard-setting- resulting in exceptional customer service.

This collaborative approach creates change that is not only effective but is also sustainable as people within the business are proud to take ownership.maintenance of EX installations offshore according to IEC 60079-17 and DNV OS-D201.
