

SPARES & OBSOLESCENCE SERVICES

V 001

10.19

PSW Group draw on more than 40 years of offering spares support services globally to our clients.

We have a proven client portfolio that we continue to build upon with each project and consultation, ensuring that we will always maximise your return on investment no matter who manufacture, install, maintain or operate your machine.

At PSW, and in conjunction with OEM's we carry out spares optimisation reviews on your asset equipment to identify gaps in spares holding and flag obsolescent components in systems.

Using our maturity matrix, workflows, processes and experience, we enable a reduction in spares levels and the ability to have the correct spares available.

Spares and obsolescence evaluations have been carried out on mature assets globally in multiple industry verticals, achieving best practices in materials management.

Findings and optimisation projects have resulted in:

- Increased confidence in spares by customer
- Correct spares available
- Supply of CM Engineers (Covering all CM Techniques)
- 30% reduction in inventory (varies by case)
- Improved reliability (repair parts on shelf so less down time)
- Optimised workflows
- JIT where feasible
- Time capsule (managed certified equipment)

Other services associated with best practice spares management:

- CMMS Sparing and Obsolescence Support
- Procurement and Supply Chain Strategy
- Storage & Preservation Maintenance
- Training (materials management/optimisation)
